STORAGE AND MAINTENANCE

- Replace your filter every 3 months or 320 gallons to prevent bacteria and fungus growth in your filter, supply lines, and storage tank.
- Keep your unused filter in a cool, dark, and dry place until you need them.

WARNINGS

- Do not use with water above 122 °F / 50 °C.
- To reduce the risk of property damage due to water leakage, this filter MUST be installed in accordance with the operating specifications and instructions.
- This filter unit must be replaced on regular basis.
- Failure to follow instructions and operating specifications will void your warranty. Further, manufacturer assumes no responsibility or liability for damages arising out of misuse of the product.

FREQUENTLY ASKED QUESTIONS

- ①

Q: Why does water leak between the mounting base and the faucet?

A: The filter may not have been installed properly. Or the silicone washer may be damaged. Re-install the filter. Wrap Teflon Tape around the joint of mounting base and the faucet. If it doesn't work, replace the silicone washer.
- ②

Q: Why does the filtered water run quite slowly?

A: The filter cartridge may be clogged. Replace the filter cartridge.
- ③

Q: Why does the unfiltered water run quite slowly?

A: There may be dirt in filter steel mesh. Clean the filter steel mesh.
- ④

Q: Why does the water taste funny?

A: The filter cartridge is not installed appropriately, or it should be replaced. Please re-install it in a correct way. If there is still bad taste, please replace it.
